the advent of artificial earth satellites in 1957 58 opened a new dimension in the field of geophysical exploration discovery of the earth s radiation belts consisting of energetic electrons and ions chiefly protons trapped by the geomagnetic field followed almost immediately 1 2 this largely unexpected development spurred a continuing interest in magnetospheric exploration which so far has led to the launching of several hundred carefully instrumented spacecraft since their discovery the radiation belts have been a subject of intensive theoretical analysis also over the years a semiquantitative understanding of the governing dynamical processes has gradually evolved the underlying kinematical framework of radiation belt theory is given by the adiabatic theory of charged particle motion 3j and the interesting dynamical phenomena are associated with the violation of one or more of the kinematical invariants of adiabatic motion among the most important of the operative dynamical processes are those that act in a stochastic manner upon the radiation belt particles such stochastic processes lead to the diffusion of particle distributions with respect to the adiabatic invariants

the observational data indicate that some form of particle diffusion plays an essential role in virtually every aspect of the radiation belts

the transition from latin to vernacular languages in the late middle ages and the dramatic rise of a new readership produced a huge bulk of translations particularly of religious literature in its various genres the solutions are so multifarious that they defy any attempt to outline general theories this is particularly visible when the same text is translated or rewritten at different times and in different languages or genres through a minute analysis of texts this book aims at highlighting lexical syntactic and stylistic choices dictated not only by the source but also by new readers and patrons or by new destinations of the works established categories such as literalness and fidelity are thus questioned and integrated with these other factors which while being more external do nonetheless impinge on the very idea of translation and consequently on its assessment far from being a mere transfer from one language to another a medieval translation verges on a form of creative writing and as such its study becomes a fascinating investigation into the very process of textual production

based on the analysis of a specially compiled corpus of internationally recognized english as a foreign language efl reading tests at different levels of proficiency this volume explores the relation between the complexity of written texts and the difficulty of reading comprehension tests it brings together linguistic investigations into the text inherent complexity of the tests and a study of the data derived from their administration to groups of italian university students the study of text complexity draws on corpus linguistics text linguistics and systemic functional linguistics both quantitative and qualitative analyses are carried out on the language used in the reading texts and in the related tasks that make up the corpus of tests the assessment of test difficulty on the other hand is informed by research on language testing and in

particular by findings and methodologies of classical test theory and item response theory relevant aspects of these theories are used to analyze and interpret both the data obtained from the administration of the tests and the data collected by means of feedback questionnaires completed by test takers the application of such diverse methodologies and the subsequent comparison of the results of the analyses has brought out interesting correlations between text inherent complexity perceived test difficulty and actual test difficulty
