using the load pull method for rf and microwave power amplifier design this new book on rf power amplifier design by industry expert dr john f sevic provides comprehensive treatment of rf pa design using the load pull method the most widely used and successful method of design intended for the newcomer to load pull or the seasoned expert the book presents a systematic method of generation of load pull contour data and matching network design to rapidly produce a rf pa with first pass success the method is suitable from hf to millimeter wave bands discrete or integrated and for high power applications those engaged in design or fundamental research will find this book useful as will the student new to rf and interested in pa design the author presents a complete pedagogical methodology for rf pa design starting with treatment of automated contour generation to identify optimum transistor performance with constant source power load pull advanced methods of contour generation for simultaneous optimization of many variables such as power efficiency and linearity are next presented this is followed by treatment of optimum impedance identification using contour data to address specific objectives such as optimum efficiency for a given linearity over a specific bandwidth the final chapter presents a load pull specific treatment of matching network design using load pull contour data applicable to both single stage and multi stage pas both lumped and distributed matching network synthesis methods are described with several worked matching network examples readers will see a description of a powerful and accessible method that spans multiple rf pa disciplines including 5g base station and mobile applications as well as sat com and military applications load pull with cad systems is also included they will review information presented through a practical hands on perspective the book helps engineers develop systematic accurate and repeatable approach to rf pa design provides in depth coverage of using the load pull method for first pass design success offers 150 illustrations and six case studies for greater comprehension of topics

when art hits the headlines it is usually because it has caused offence or is perceived by the media to have shock value over the last fifty years many artists have been censored vilified accused of blasphemy and obscenity threatened with violence prosecuted and even imprisoned their work has been trashed by the

media and physically attacked by the public in art outrage john a walker covers the period from the late 1940s to the 1990s to provide the first detailed survey of the most prominent cases of art that has scandalised the work of some of britain s leading and less well known painters and sculptors of the post war period is considered such as richard hamilton bryan organ rachel whiteread reg butler damien hirst jamie wagg barry flanagan and antony gormley included are works made famous by the media such as carl andre s tate gallery installation of 120 bricks rick gibson s foetus earrings anthony noel kelly s cast body parts sculptures and marcus harvey s portrait of myra hindley walker describes how each incident emerged considers the arguments for and against and examines how each was concluded while broadly sympathetic to radical contemporary art walker has some residual sympathy for the layperson s bafflement and antagonism this is a scholarly yet accessible study of the interface between art society and mass media which offers an alternative history of post war british art and attitudes

nanotechnology is moving out of its comfort zone of scientific discourse as new products go to market and national and international organizations roll out public engagement programs on nanotechnology to discuss environmental and health issues various sectors of the public are beginning to discuss what the controversy is all about nongovernmental organizations have long since reacted however now the social sciences have begun to study the cultural phenomenon of nanotechnology thus extending discourses and opening out nanotechnology to whole new social dimensions these dimensions and their newly constructed imaginings around nanotechnology intersect with the ecology health governance economy and illusory futures there is always a need for more than just an elsi ethical legal and social implications sideshow within nanotechnology the collective public imaginings of nanotechnology include tangles of science and science fiction local enterprises and global transformation all looking forward toward a sustainable future while looking back on the past debates on science and nature this book highlights the environmental health and economical concerns of nanotechnology and discusses its future research directions it provides academia and industry a high tech start up that will revolutionize modern practices with little and outdated literature available on the topic this timely book will be helpful for the readers as it thoroughly covers the environmental ethical and economical issues of nanotechnology

comprehensive resource on the dynamically developing issue of radio communication over long distances especially in outer space reception of weak radio signals from space explores all aspects of detecting and making sense of extremely weak radio frequency rf signals especially those emanating from space the subject matter ranges from general physics fundamentals to highly specialized issues of design and optimization of microwave antennas low noise amplifiers receivers transmitters and frequency synthesizers with very specific characteristics special consideration is paid to the advanced technique of radio linking by reflection of signals from the lunar surface where using modern software for digital communication it is possible to realize links with signals ten or more decibels weaker compared to analogue modes each chapter briefly summarizes the theory and applicable relationships and complements the discussed topic with

descriptions of specific solutions for individual parts of the communication system detailed annotated examples of calculations and implementations are included to aid in reader understanding the book also discusses specific properties of antennas including brightness and noise temperature directivity and polarization and covers the technical characteristics of interplanetary probes such as voyager cassini mars odyssey and others additional topics in reception of weak radio signals from space include microwave receivers covering noise matching cooled amplifiers noise figure measurement and low noise amplifiers for 1 3 and 10 ghz bands wave propagation in free space and the influence of the atmosphere via precipitation clouds and the ionosphere including techniques for measuring the figure of merit g t of the receiving system local oscillators including direct digital and phase locked loop synthesizers high frequency rectangular and circular waveguides and coaxial and planar transmission lines parabolic antennas describing mirror geometry and its radiation as well as scalar radiator feeds reception of weak radio signals from space is an excellent resource on up to date information for engineers and scientists working in space communications as well as graduate and senior undergraduate students and radio amateurs
